C Educational Innovations and Other Contributions

C.1 Curriculum Development

CS 7647 / 8803-LS (Machine Learning with Limited Supervision): This is a graduate course which focuses on new techniques in forms of learning representations from data with limited human intervention. Students will be exposed to cutting edge research and technologies and will learn to understand, explain to others and critically evaluate new work. Finally, the course involves a semester long project in which students work in teams to develop new learning approaches or apply existing approaches to new applications. Throughout the semester teaching and learning will focus on gaining the ability to digest and critically analyze new research. Students are expected to work together through presentations, formal debates, and discussions towards achieving this goal. This course was converted into a permanent course after repeated enrollment interest and positive reception.
